'Many-Shot Jailbreaking' Defeats Gen AI Security Guardrails

Researchers from Anthropic reported that they've discovered a new technique to defeat safety guardrails. They dubbed the method "many-shot jailbreaking" after testing it out on AI tools developed by the likes of OpenAI, Meta and their own large language model. Limits programmed into generative AI are meant to stop the tool from answering malicious queries such as "How do I make a bioweapon?" or "what's the best way to build a meth lab?"
